

# Hands-on Lab: Joins in MySQL using phpMyAdmin

**Estimated time needed:** 20 minutes

In this lab, you will learn how to create tables and load data in the MySQL database service using the phpMyAdmin graphical user interface (GUI) tool.

## Software Used in this Lab

In this lab, you will use [MySQL](#). MySQL is a Relational Database Management System (RDBMS) designed to efficiently store, manipulate, and retrieve data.

To complete this lab you will utilize MySQL relational database service available as part of IBM Skills Network Labs (SN Labs) Cloud IDE. SN Labs is a virtual lab environment used in this course.

## Objectives

After completing this lab, you will be able to:

1. Determine the correct type of join to use for a given problem.
2. Write and execute joins to query data from multiple tables.

## Database Used in this Lab

**mysql\_learners** database has been used in this lab.

Here you will be creating and inserting data into the below mentioned 3 tables

- 1.chicago\_public\_schools
- 2.chicago\_socioeconomic\_data
- 3.chicago\_crime

Here you will be using 3 dump files for this purpose.

[chicago\\_public\\_schools](#)

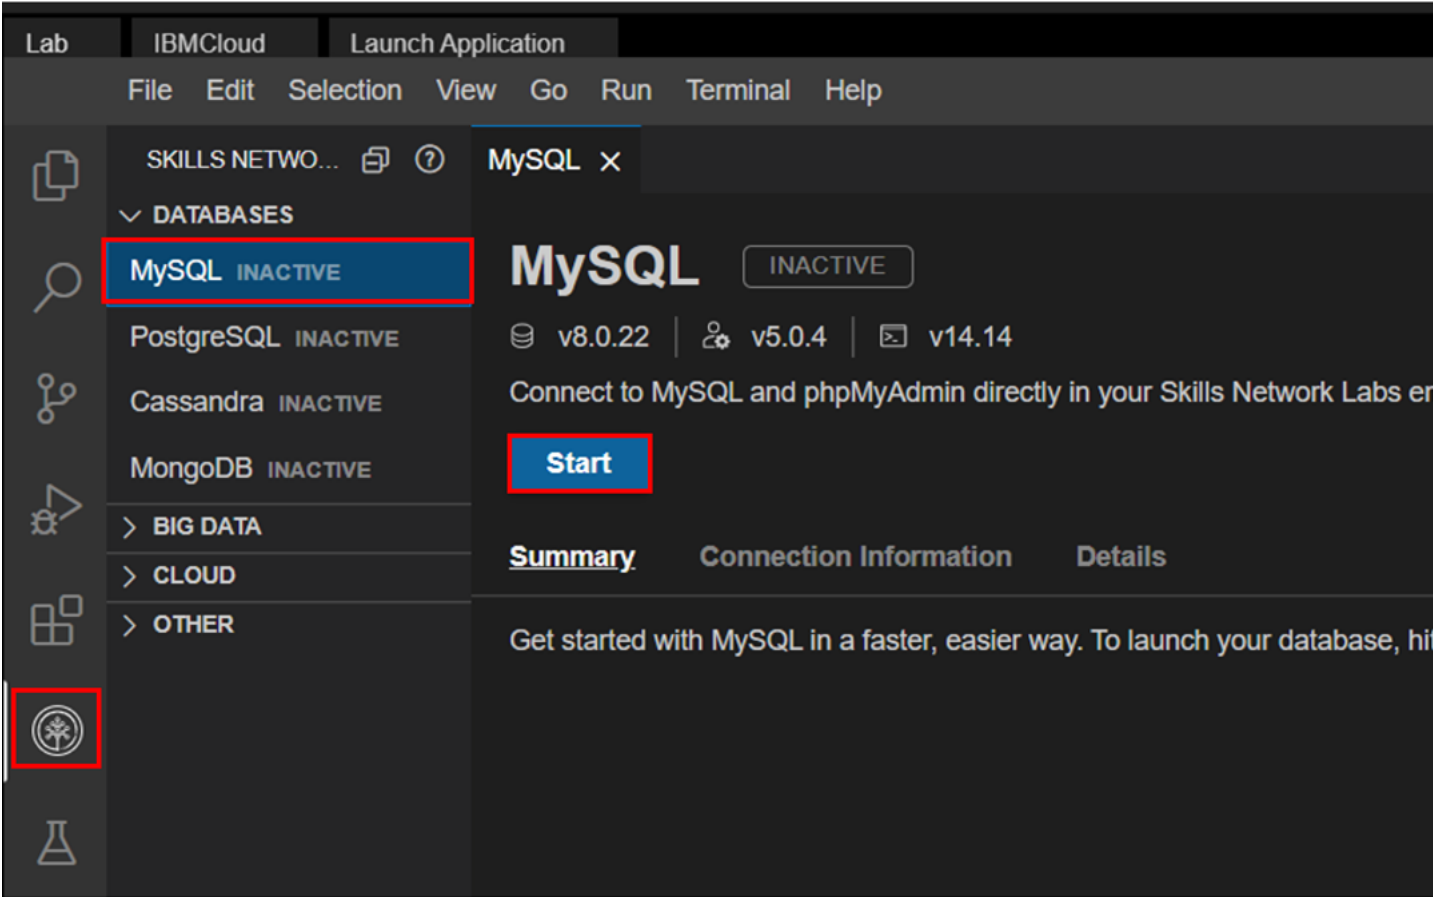

[chicago\\_crime](#)

[chicago\\_socioeconomic\\_data](#)

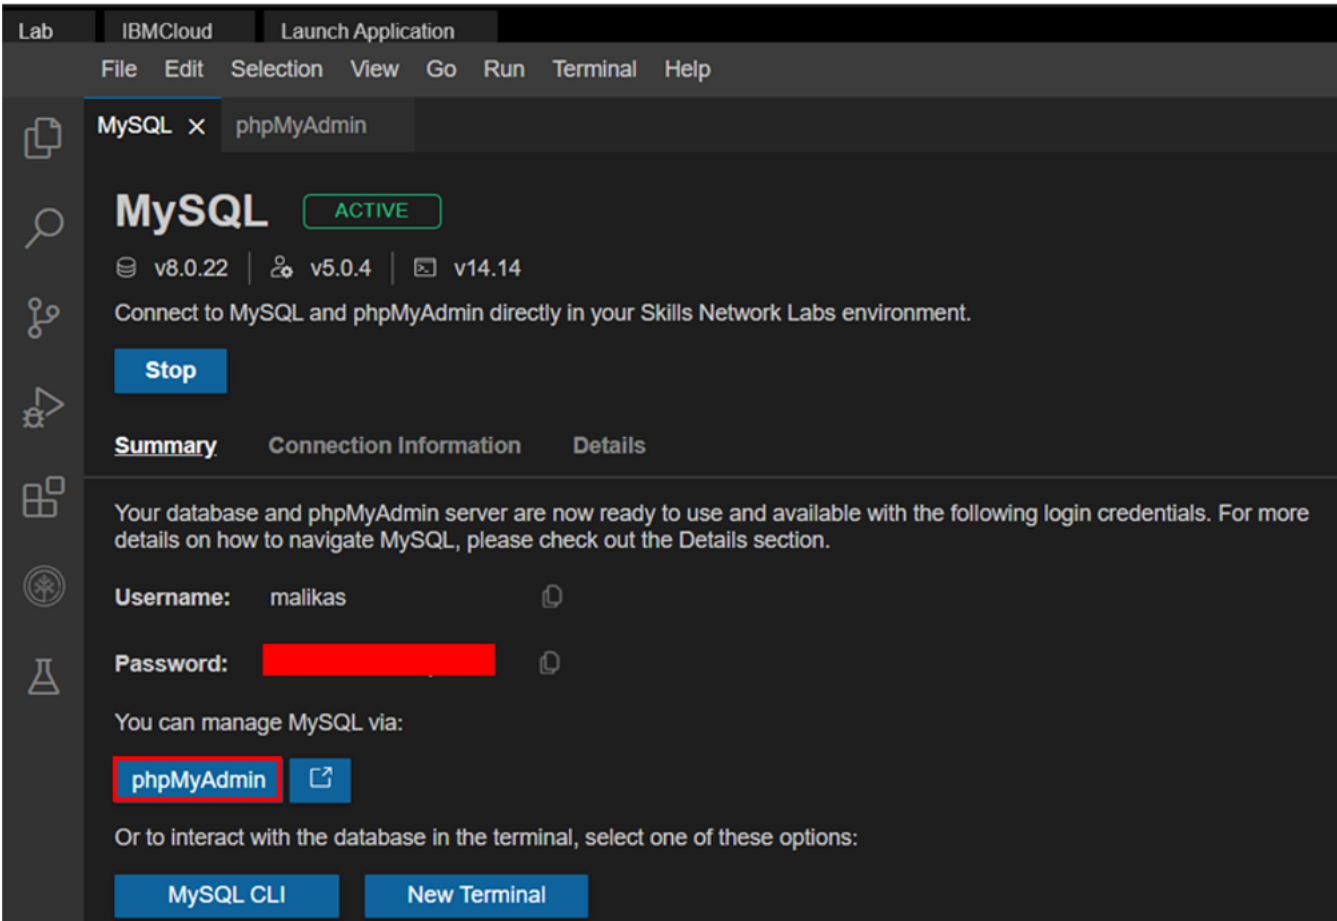

## Task A: Create a database

1. Click on **Skills Network Toolbox**. In **Database** section, click **MySQL**.

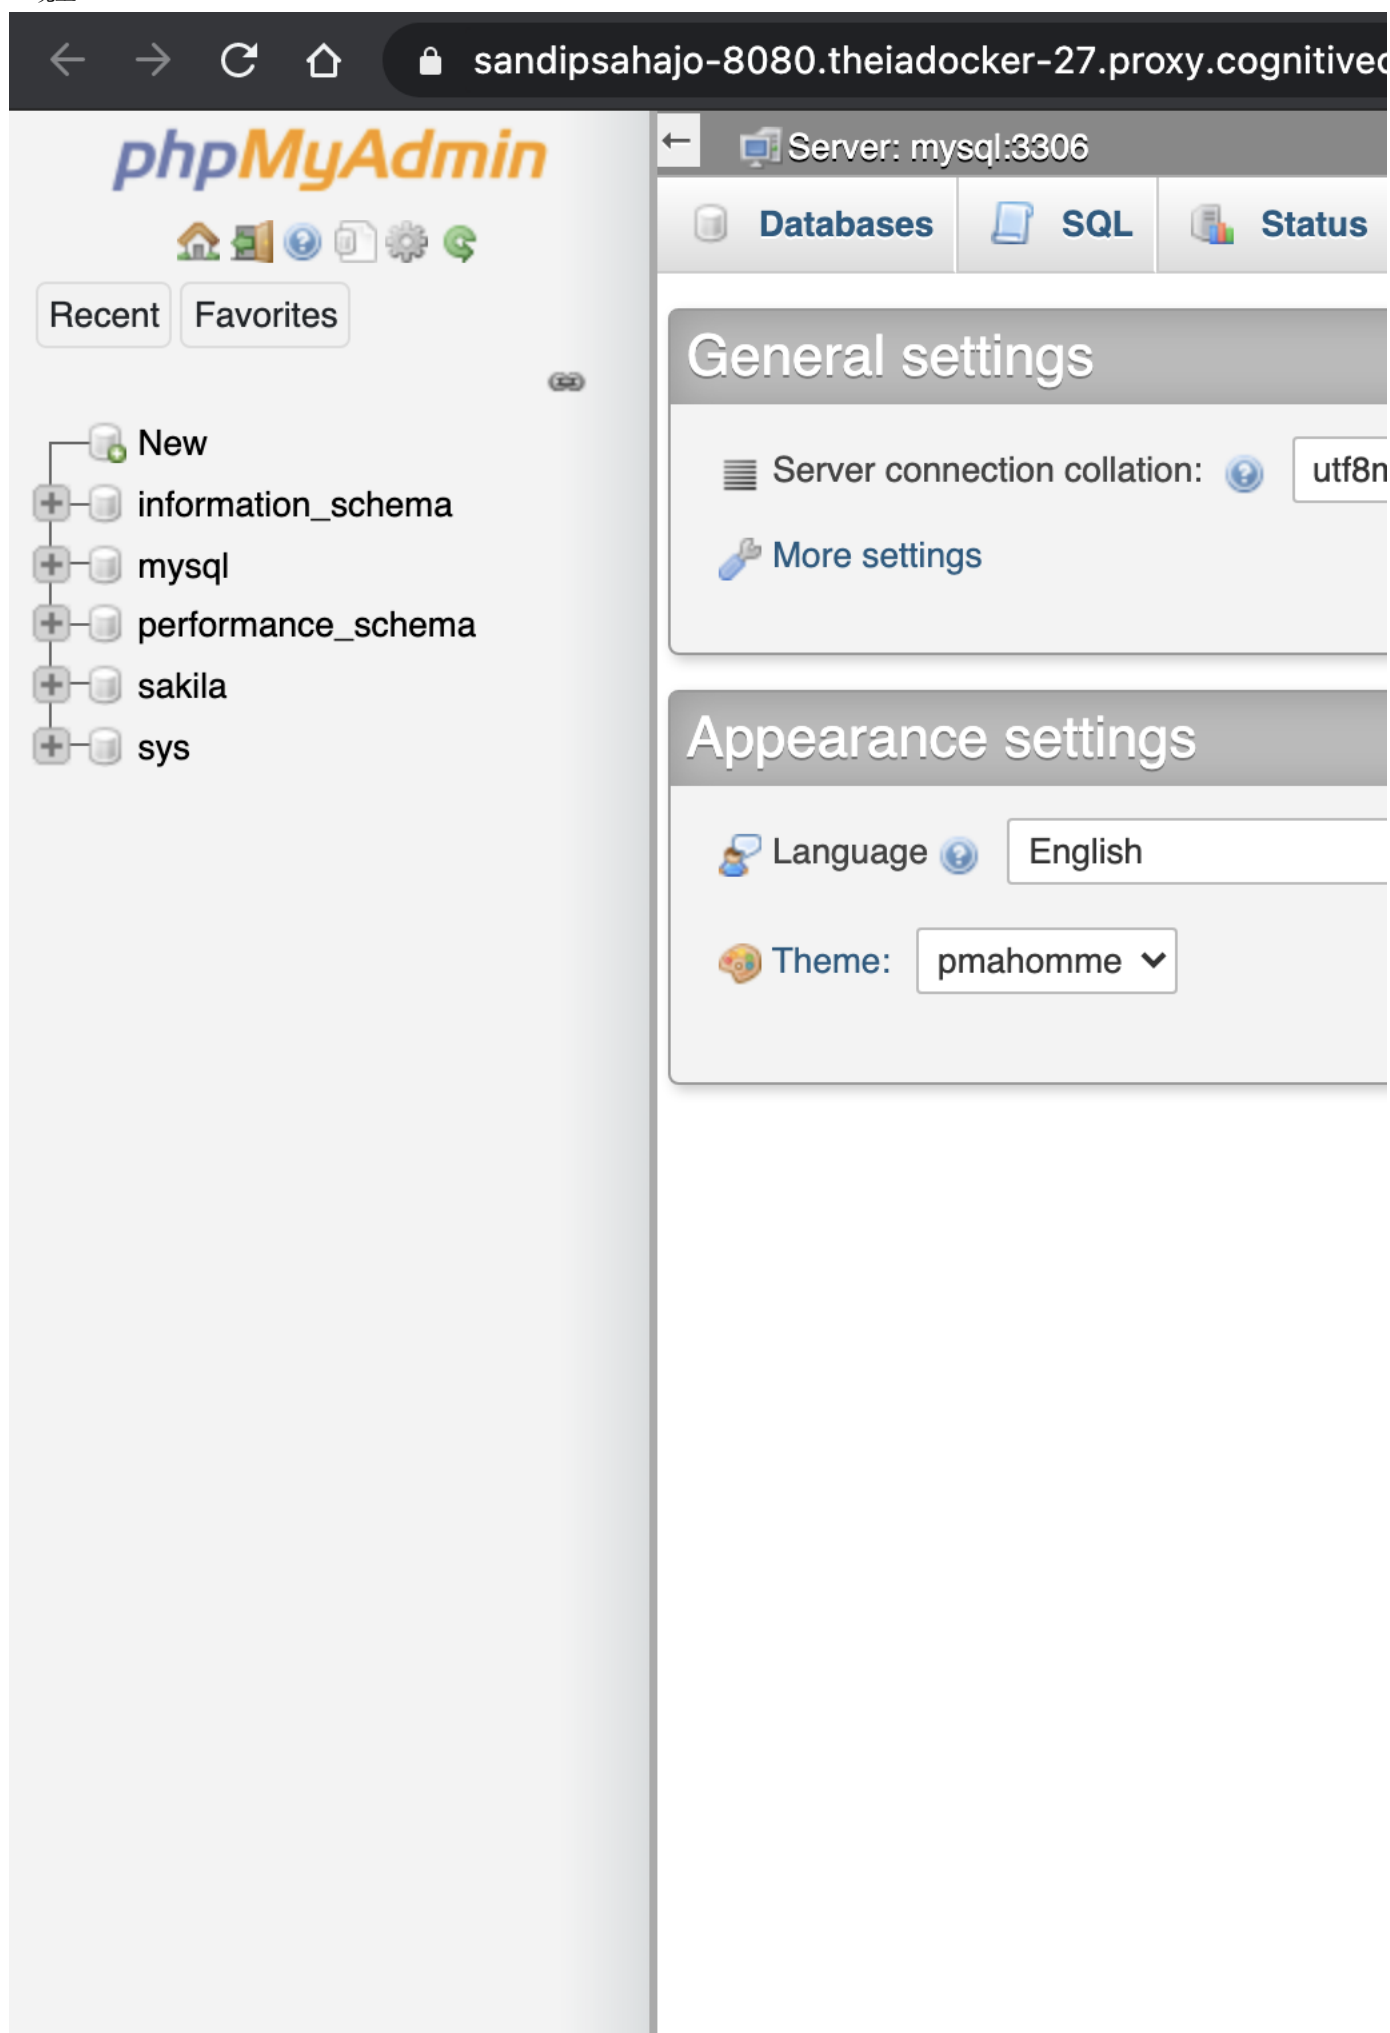

To start the MySQL click **Start**.

2. Once MySQL has started, click on phpMyAdmin button to open phpMyAdmin in the same window.

3. You will see the phpMyAdmin GUI tool.

4. In the tree-view, click **New** to create a new empty database. Then enter **Mysql\_Learners** as the name of the database and click **Create**.

The encoding will be left as **utf8mb4\_0900\_ai\_ci**. UTF-8 is the most commonly used character encoding for content or data.

Proceed to Task B.

With selected: Drop

Note: Enabling the database statistics here might cause heavy traffic between the web server and the MySQL server.

• Enable statistics

Load the dump files one by one into the database **Mysql\_learners** by clicking the **Import** tab and choose the file.  
Click on **Go** button.

## Importing into the database "Mysql\_learners"

File to import:

File may be compressed (gzip, bzip2, zip) or uncompressed.  
A compressed file's name must end in **.[format].[compression]**. Example: **.sql.zip**

Browse your computer: 

Choose File

chicago\_pu...\_schools.sql (Max: 2,048KiB)

You may also drag and drop a file on any page.

Character set of the file: 

utf-8

Partial import:

☒ Allow the interruption of an import in case the script detects it is close to the PHP timeout limit. *(This might be a good way to import large files, i*

Skip this number of queries (for SQL) starting from the first one: 

0

Other options:

☒ Enable foreign key checks

The tables are created and the data is loaded successfully. Repeat the same operation with the other 2 dump files to create and load the tables.
